

Vertical edge closure steel clips

Steel Clips 01

stainless steel clips 01: assembled on the top of wall side pedestals.

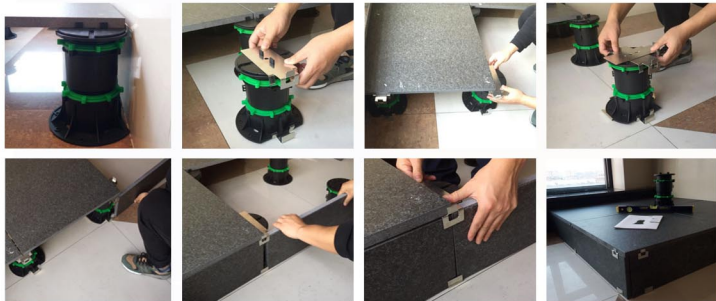

Steel Clips 02

stainless steel clips 02: assembled on the top of edge pedestals which create a vertical footstep.

Steel Clips 03

stainless steel clips 03: assembled on the base of pedestal which create a vertical footstep.

Performance

Stainless steel clips 01: Steel clips 01 is made of stainless steel. It is designed to avoid contact between the outdoor tiles and the wall. It can create a damper to absorb longitudinal and transverse thermal expansion. Using these clips ensures a stable floor surface and a straight and elegant perimeter.

Stainless steel clips 02 and 03: Steel clips 02 and 03 is made of stainless steel. They are used for vertical side tile closure. Designed to solve a problem typical of many external floors, i.e. how to fill the gap around the edge when no perimeter wall is present. This solution is innovative, easy and elegant. This system consists two types of clips, one assembled on the top of pedestal, another assembled under the base. It creates a firm seat capable of gripping the tiles which is cutted to fill the gap, making perfect vertical closure.
